

[illegible]

The diagram shows a Wheatstone bridge circuit. The top node is connected to a 3V3 supply. The bridge consists of four resistors: R133 (1K5) on the top branch, R14 (THERMISTOR) on the left branch, R15 (0R5) on the right branch, and R78 (1K5) on the bottom branch. The output voltage, labeled 'True', is measured across the bottom branch (R15 and R78). The thermistor is represented by a square symbol with a diagonal line through it.

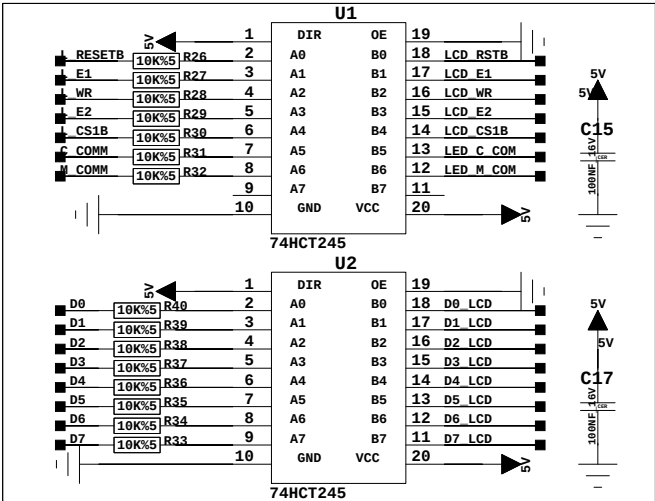

The three circuit diagrams illustrate the CAN bus connections for three different ICs: U10, U11, and U12. Each diagram shows a 5V supply connected to the TXD pin (pin 1) and a 100nF capacitor connected to the GND pin (pin 2). The VCC pin (pin 3) is connected to the CAN bus lines. The RXD pin (pin 4) is connected to the CAN bus lines. The SPLIT pin (pin 5) is connected to the CAN bus lines. The CAN bus lines are connected to the CAN1 HIGH (pin 7), CAN1 LOW (pin 6), CAN2 HIGH (pin 7), and CAN2 LOW (pin 6) pins. The CAN bus lines are connected to the CAN1 HIGH (pin 7), CAN1 LOW (pin 6), CAN2 HIGH (pin 7), and CAN2 LOW (pin 6) pins. The CAN bus lines are connected to the CAN1 HIGH (pin 7), CAN1 LOW (pin 6), CAN2 HIGH (pin 7), and CAN2 LOW (pin 6) pins.
